

CANADIAN BACKBONE

While Enerplus maintains a diversified portfolio of oil and gas assets across North America, Canadian operations continue to be the backbone of the company, with production of about 60,000 BOE/day from its properties across Western Canada.

Employees at Enerplus are getting the most out of the company's crude oil waterflood properties by looking at these assets with fresh eyes and focusing their energy on having the right processes, technologies and teams in place to unlock oil resources. They know that by managing properties throughout the development cycle, they can generate greater value.

To that end, Enerplus is using the latest technologies to improve and enhance oil recovery. These include relatively simple techniques – such as optimizing injection patterns to maximize the amount of oil that can be swept out of the reservoir – and more advanced technologies, including using polymers to coax more oil out of mature oil fields.

As the people at Enerplus continue to create value for shareholders through incremental enhancements to their asset base, they're creating energy inside the company, too. There's a collaborative approach that's ingrained in the company's culture. Multi-disciplinary teams work on projects from beginning to end, so there's a real sense of ownership. That cohesion helps drive progress. And for the employees working on Canadian plays, the experience is invaluable.

If you want to be part of a company that believes its people are its most important energy assets, explore the possibilities at www.enerplus.com.

EMPLOYEE PROFILE

Alice Batonyi

Project Lead – Southeast Alberta Oil

What do you do at Enerplus?

I'm a senior reservoir development engineer in our waterflood group. Part of my job is to determine the best water injection patterns – and injection targets – to optimize oil recovery. It feels great when the puzzle pieces come together.

What opportunities excite you at Enerplus?

I've never worked for a company with this much opportunity and growth potential. We have so many projects on the go that we have to pace ourselves to get it all done. Compared to bigger companies, things at Enerplus happen at supersonic speed. The work I'm doing in chemically enhanced oil recovery is creating value for the company and is a career maker for me.
